"Cleaning your world from the outside in."

January 10, 2012

Mr. Ken Brent  
Millersville University  
Millersville, PA 17551

Dear Mr. Ken Brent,

Thank you for allowing Power Pros Pressure Washing the opportunity to provide you with the following proposal regarding your much needed exterior pressure washing to the Byerly building located at 24 School Lane.

After a thorough examination of the building, we have put together a proposal to perform an exterior pressure cleaning addressing the entire building. The following pages of photos as well as description of work to be performed will provide detail into this needed service.

The building has a high build up of mold and algae growth covering most all bottom and top limestone as well as most brick. In order to successfully remove all stains and growth we recommend performing what is called an acid wash treatment. This is safe for the surface and safe for the plantation. This treatment is referred to as an acid wash only because of the application of the detergent and the reaction between a low Ph and a high Ph detergent. With the use special soaps, hot water and controlled pressure we will successfully remove all mold and discoloration without damaging the soft surface.

Power Pros again would like to thank you for contacting us. We have had the privilege of serving many school districts around our area and look forward to working with you. With our many years of experience in performing washings to large buildings we will guarantee you a great outcome. We will provide you with detailed descriptions of all work to be performed as well as a great line up of before and after pictures of every project. We look forward to becoming a great asset to Millersville University.

Thank you,

William Rivera  
President/Owner
